

Disaster Recovery - Business Continuity

Protection At All Times

Don't let an unexpected catastrophe damage your reputation or slow your growth. With our Disaster Recovery as a Service (DRaaS) your business operation isn't affected by an outage, allowing you to focus on your customers. We come onsite and learn everything we can about your internal infrastructure - from your daily processes to the vital assets your business relies on. We assess every component and create a custom plan that is safe and secure.

60% of companies that lose their data shut down within 6 months of the disaster.

-  Acquire New Technology
-  Purchase Services and Products as Needed
-  Seamless Business Continuity
-  Constant IT Support
-  24x7 Monitoring/Support to Ensure Optimal Productivity

The switch happens automatically based on defined triggers and all the data is just there.

Business Continuity Plans

The size and geographic locations determine the types of resources required for an organization's BC/DR strategy. We provide the safeguards to ensure you can manage any type of man-made or natural disaster. We do the work so you don't notice an outage, and recovery happens quickly with minimal data loss. Our team provides end-to-end support for plan development, DR sites and cloud-based backup systems. Good planning and execution protects your infrastructure investment. Most importantly it protects your investment in your company's future.

Hot Sites

Having a cold 1U server in a rack with an OS and database software installed is better than nothing when it comes to disaster recovery but it most likely will not meet your company's demands when it's needed most. In comparison, a warm site helps with regard to recovery point and time objectives, but depending on the size of your organization, a lot of in-flight data will be missing once the backup finally completes. We work closely with your team to implement the BC/DR site design, so your business has little to no interruption in service. The switch happens automatically based on defined triggers and all the data is just there - and it works.

Backup Systems

Mozy is a good cloud-based backup option if you have remote offices spread around the country with a large mobile workforce. We help set the storage quota to your preference, either at the organizational or user-group level. The self-service functions allow individual users to restore files. We can hook it up to your authentication directory for Federated Identity support and enable SSO. All deployed using your favorite implementation toolset. For cloud-to-cloud BC/DR, we're experienced with Datto's line of products. No matter if your business is small and growing or large and growing larger, we can implement and configure the solution to your specific needs. It can scale from image-based backups for small companies to hybrid- and full-cloud deployments.
